

TRENDS IN TOBACCO USE AMONG NEW MEXICO ADULTS

Percent of New Mexico Adults who Currently Smoke Cigarettes, 2004-2014

Percent of New Mexico Adults who Currently Use Spit/Chew Tobacco, Cigars, or E-Cigarettes, 2006-2014

Compiled by NM Department of Health, Tobacco Use Prevention and Control Program using 2004-2014 NM Behavioral Risk Factor Surveillance System (BRFSS) data and 2014 NM Tobacco Evaluation Survey.

*In 2011, CDC implemented enhanced survey methods for the BRFSS to keep up with changes in cell phone use in the US and to take advantage of improved statistical procedures and computing capacity. Comparing BRFSS data from 2011 forward to data from 2010 and prior is not recommended due to these changes in survey methods.
